Prosecution Witness I

Mr. Dolu Kumar

I, Dolu Kumar, son of Rajan Kumar, aged 34 years, have been employed as a Turbine Systems Engineer at the Jujutsu Hydroelectric Dam Construction Site for approximately one year and seven months. My responsibilities include overseeing the inspection, maintenance, and functional assessment of the entire turbine system at the dam site. I work under the supervision of Mr. Aryan, the site engineer.

I was scheduled to inspect the turbine control room area on Monday, 12.01.2026, before the regular workers commenced their shift, as concreting of that section was due to begin shortly. The floor inside the turbine control room had not yet been cemented at that time.

At approximately 01:30 AM on 12.01.2026, I proceeded to the turbine control room, opened the door, and entered. Upon entering, I noticed a dark reddish-brown stain on the soil floor near the base of the turbine structure. I then noticed that one of the turbines covers appeared displaced. I removed the turbine covers and upon removal, I observed a human hand visible inside the turbine chamber.

I immediately contacted Koban Police Station at approximately 01:35 AM. Police arrived at approximately 06:30 AM. I ensured nothing was disturbed in the interim. Upon extraction of the body, I noticed that the deceased as Mr. Rathinavel by his face, and his dark blue work uniform.

Mr. Rathinavel was the elected union leader at the site. He consistently worked for the welfare of workers, taking up matters of safety, timely wages, and access to proper facilities. He was well-regarded by the majority of workers. I was also present at the protest on 02.01.2026. During the protest, I personally witnessed Mr. Gojo Kumar confront and push Mr. Rathinavel with force, causing Mr. Rathinavel to fall and sustain an injury to his right hand. I personally escorted Mr. Rathinavel to the hospital where he was found to have a fracture. On the way to the hospital Mr. Gojo Kumar stated if people like Rathinavel continued at the site, work would not be done properly at all. After that day I did not meet Rathinavel personally again anywhere.

Prosecution Witness 2

Mr. Mayur

My name is Mayur and I work as a labourer at the hydroelectric dam construction site being built by Jujutsu Constructions Pvt. Ltd.

On 12 January 2026, when the police from Koban Police Station came to the construction site after getting information about a body found in the turbine chamber, I was present there along with some other workers. The police recovered the body and asked if anyone could identify the person. When I saw the body, I immediately recognized him asRathinavel. I had been working with him at the site for several months and knew him well, so I informed the police that it was Rathinavel.

Rathinavel and I had become quite close while working at the site. We often had lunch together and spoke regularly during breaks, so I was aware of many of the issues going on in the labour union. Even when elections were held for the Rodo Labour Union at the site. Rathinavel contested against Ravichandran, who had earlier been the leader of the union. Many workers supported Rathinavel and he eventually became the new union leader. After that, I noticed that there was some tension between him and Ravichandran in multiple occasions.

I saw Rathinavel and Sukuna Ravichandran having a heated argument near the site canteen. They were arguing about the union leadership and whether the protests should continue. Both of them seemed very angry and were speaking loudly. The argument went on for a few minutes before some other workers stepped in and separated them.

On 20 December 2025, Rathinavel organised a strike at the site against the company management regarding safety issues after one of the workers had been seriously injured. During the strike the situation became chaotic and turned violent. I saw that Gojo Kumar, the owner of the company, got injured during the incident and his dominant hand was broken. After that day, people at the site said that he seemed very angry about what had happened.

The next day, on 21 December 2025 at around 1:30 PM, there was an incident during construction work near the cement mixing machine. Rathinavel almost slipped and fell inside the machine while work was going on. I was nearby at that time and managed to pull him away before he fell in. If he had fallen inside the machine, he could have been severely injured or even permanently impaired. After the incident, Rathinavel told me that he felt it might not have been an accident, though he did not say who he suspected.

After that one day during lunch time, Rathinavel spoke to me and a few other workers and said that he felt someone was trying to remove him from his position as the union leader. He looked worried when he said this, but he did not mention anyone’s name. The last time I saw Rathinavel was on 10 January 2026 near the turbine control room area of the dam site after work hours.

Prosecution Witness 3

Dr. Jin Sakai

I, Dr. Jin Sakai, Senior Forensic Pathologist at the Government District Hospital, Shiboya, I hold a postgraduate degree in Forensic Medicine and Pathology and have been practising as a forensic pathologist for approximately nineteen years. I have conducted over two thousand post-mortem examinations during the course of my career. I am currently attached to the Government District Hospital, Shiboya, in the capacity of Senior Forensic Pathologist.

On 13.01.2026 at approximately 4:00 AM, the body of the deceased, identified as Mr. Rathinavel, male, aged 38 years, was received at the mortuary of the Government District Hospital, Shiboya. The body was accompanied by a requisition from Koban Police Station. I commenced the post-mortem examination at 4:30 AM and concluded at 6:00 AM on the same date.

Upon external examination, I observed one stab wound on the right hip region of the deceased, and bloodstaining on the clothing around the lower torso and hip region. I further observed multiple abrasions on the arms, shoulders, and back of the deceased, which in my opinion were caused by contact with rough or mechanical surfaces.

Upon internal examination, I found that the stab wound on the right hip region had penetrated the abdominal cavity. The wound had perforated the stomach, resulting in leakage of gastric contents and digestive acids into the surrounding abdominal cavity. In my opinion, death occurred due to haemorrhagic shock and internal complications resulting from the penetrating stab injury that perforated the stomach and caused extensive internal bleeding.

Based on the degree of rigor mortis, the extent of post-mortem decomposition, and the condition of the body, I estimate the time of death to be approximately between 23:00 hrs on 10.01.2026 and 01:00 hrs on 11.01.2026.

I have no personal or professional interest in the outcome of this case. My findings are based solely on my examination of the body and are accurate to the best of my professional knowledge. This statement has been read out to me and is correct.

Prosecution Witness 4

Ms. Shruthi Marqus

I, Ms. Shruthi Marqus, Forensic Document Examiner and Handwriting Analyst at the Shiboya Regional Forensic Science Laboratory, do hereby state as follows:

I hold a postgraduate degree in Forensic Science with specialisation in Questioned Document Examination. I have been working in the field of forensic handwriting and document analysis for approximately eleven years. I have submitted expert opinions in over three hundred cases before various courts and tribunals. I am a registered expert with the Shiboya Regional Forensic Science Laboratory, registration number FSL/SHB/QDE/014.

On 13.01.2026, I received a sealed evidence parcel from Koban Police Station bearing Seal No. KPS/SM/01/2026, containing one handwritten note on plain white paper of approximately A5 size. I also received a second parcel bearing Seal No. KPS/SM/05/2026, containing the Site Records Log maintained at the Jujutsu Hydroelectric Dam Construction Site. Additionally, the personal diary of the deceased Mr. Rathinavel bearing Seal No. KPS/SM/04/2026 was submitted to me for reference.

I examined the following features in detail: letter formation, spacing between letters and words, pen pressure, stroke direction, slant of writing, connecting strokes, and formation of specific characters. I used a stereomicroscope and digital imaging software in the course of my examination.

Upon comparison, I found significant and consistent similarities between the handwriting on the questioned note and the handwriting of Mr. Ravichandran as present in the Site Records Log, across multiple handwriting characteristics including letter formation, pen pressure pattern, and distinctive stroke habits. I did not find any features in the questioned note that were consistent with the handwriting of the deceased Mr.Rathinavel as available from his personal diary.

I have no personal interest in the outcome of this matter. My opinion is based solely on scientific examination and analysis of the submitted documents. This statement has been read out to me and is correct.

Prosecution Witness 5

Mr. Sin Carter

I, Ms. Shruthi Marqus, Forensic Document Examiner and Handwriting Analyst at the Shiboya Regional Forensic Science Laboratory, do hereby state as follows:

I hold a postgraduate degree in Forensic Science with specialisation in Questioned Document Examination. I have been working in the field of forensic handwriting and document analysis for approximately eleven years. I have submitted expert opinions in over three hundred cases before various courts and tribunals. I have no personal interest in the outcome of this matter. My opinion is based solely on scientific examination and analysis of the submitted documents. This statement has been read out to me and is correct.

Prosecution Witness 5

Dr. Sakura Gunasekaran

I, Dr. Sakura Gunasekaran, Senior Scientific Officer at the Shiboya Regional Forensic Science Laboratory, I hold a doctorate in Forensic Biology and have been serving as Senior Scientific Officer at the Shiboya Regional Forensic Science Laboratory for approximately twelve years. My area of specialisation includes blood pattern analysis, DNA profiling, and forensic examination of biological trace evidence. I am registered under registration number FSL/SHB/SSO/003.

On 13.01.2026, I received a sealed evidence bag from Koban Police Station bearing Seal No. KPS/SM/06/2026, containing a sand sample with blood-like staining collected from the ground surface adjacent to the turbine control room of the Jujutsu Hydroelectric Dam Construction Site. The parcel was received in sealed and intact condition and I verified the seal prior to commencing examination.

On 16.01.2026, I received a further sealed parcel bearing Seal No. KPS/SM/08/2026, containing one sword along with its sheath. The sheath bore visible brownish-red staining consistent with dried blood. Both items were stated to have been recovered from outside the residential quarters of Mr. Sukuna Ravichandran per the accompanying Seizure Memo 2.

Examination of the sand sample bearing Seal No. KPS/SM/06/2026 confirmed the presence of human blood. The blood group obtained was consistent with blood group B positive, which is the blood group of the deceased Mr.Rathinavel as recorded in Postmortem Report No. 13/2026. Full DNA comparison results have been submitted in my detailed forensic report.

Examination of the staining on the sword sheath bearing Seal No. KPS/SM/08/2026 confirmed the presence of human blood. The blood group obtained from the staining on the sheath was consistent with blood group B positive.

In my expert opinion, the blood recovered from the sand sample near the turbine control room and the blood staining on the sword sheath are both consistent with the blood of the deceased Mr. Rathinavel.

I have no personal interest in the outcome of this matter. My findings are based solely on scientific examination of the submitted evidence. This statement has been read out to me and is correct.
